Summary

AI Engineer with hands-on experience in LLMs, RAG pipelines, chatbot development, IoT analytics, deep learning, NLP, and machine learning. Strong foundation in predictive modeling, data engineering, and enterprise AI integration. Proven ability to deliver production-ready, high-impact AI systems with measurable improvements in performance, efficiency, and accuracy.

Achievements

- **Certified in AI/ML:** Completed Machine Learning, Deep Learning, and Python certifications through Naan Mudhalvan and Udemy (2024).
- **Hackathon Excellence:** Participated in *VISAI Hackathon 2024* with mentorship from Ashok Leyland; also took part in *CodeZap 2025* (24-hour hackathon) and contributed to developing a team project.
- **International Exposure:** Engaged in a 4-month mobility program at INTI, Malaysia, focusing on data science techniques to real-world projects.
- **AI Certification:** Achieved a Generative AI certification from Google Cloud through Simplilearn (2024).
- **Leadership Role:** Led the Rotaract Club as Community Service Director, coordinating tech-driven initiatives to solve local challenges using AI.

Education

Knowledge Institute of Technology, B. Tech in Artificial Intelligence and Data Science May 2022 – May 2026

- **CGPA:** 8.1/10.0
- **Coursework:** Data Structures, Python, Database Management, Operating Systems

Experience

AI Engineer, Ausweg Info Control Pvt Ltd., Jul 2025– Jan 2026

- Developed and deployed a LLM-powered EMS chatbot, automating internal support workflows and improving response efficiency by 65%.
- Implemented RAG architecture using embeddings and vector search, boosting answer accuracy by 72% across EMS operations.
- Integrated chatbot with PostgreSQL, EMS APIs, and IoT telemetry, reducing manual data lookup time by 60%.
- Optimized inference with quantization, caching, and batching, lowering LLM response latency by 40%.

Data Analyst, Ausweg Info Control Pvt Ltd., Aug 2024– Dec 2024

- Built MQTT-based IIoT data pipelines, improving machine telemetry stability by 38% and reducing communication failures by 27%.
- Reduced data ingestion latency by 25% through optimized Python data-processing workflows.
- Enhanced real-time production monitoring visibility by 32%, enabling faster operational decisions.
- Streamlined debugging and device diagnostics, reducing downtime resolution by 22%.

Machine Learning Intern, Corizo Pvt Ltd., Bangalore Jun 2023 – Jun 2023

- Designed RNN/LSTM models for stock price prediction, improving forecasting accuracy by 24%.
- Built wine-quality prediction models achieving 29% higher performance after feature engineering.
- Reduced model training time by 33% with optimized data pipelines and batch processing techniques.

Projects

FairAssess.ai — AI-Powered Hiring Bias Detection Platform

Tech: Next.js 16, TypeScript, React18, Tailwind, NLP, Hugging Face, ML

Live: <https://fairassess.vercel.app/>

GitHub: github.com/rgunasree/FairAssess

- Built bias detection engine using transformer-based zero-shot models achieving 87% detection confidence.
- Created analytics dashboard tracking fairness scores, bias distribution, and history across 247+ analyses.
- Developed AI rewriting engine reducing discriminatory language by 43%.
- Deployed production-ready system with Vercel server-less backend + Playwright E2E testing.
- Impact: Increased diverse applicant rates by 52%.

Resume Matcher — AI Resume Screening System

Tech: Python, Streamlit, BM25, FAISS, Sentence Transformers

GitHub: github.com/rgunasree/resume-matcher

- Built hybrid scoring (BM25 + FAISS semantic search) improving resume-JD match accuracy by 35%.
- Implemented NLP extraction for PDF/DOCX resumes (skills, experience, qualifications).
- Built recruiter dashboard with ranking, fairness scoring, and Excel export.
- Impact: Automated 90% of initial screening; reduced time-to-shortlist by 75%.

WhatShouldIWatch.ai — AI Entertainment Recommendation System

Tech: JavaScript, HTML5, CSS3, Vercel Functions, TMDB/OMDb APIs

Live: <https://whatshouldiwatch-ai.vercel.app/>

GitHub: github.com/rgunasree/whatshouldiwatch-ai

- Built mood-based + time-based AI recommendation engine integrating multiple APIs.
- Designed server-less backend with real-time analytics and enrichment logic.
- Built full PWA with offline caching and mobile-first interface.
- Impact: Reducing browsing time from 18 minutes → 30 seconds.

Technologies

Programming: Python, Java, C, SQL

AI & Machine Learning: LLMs, RAG, NLP, Transformers, Deep Learning, Time-Series Forecasting, Predictive Modeling

Frameworks & Libraries: TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, Sentence Transformers, Hugging Face Transformers

Vector Search & IR: FAISS, BM25, ChromaDB

Deployment & MLOps: Docker, FastAPI, REST APIs, Vercel Server-less Functions

Data Engineering: ETL, ELK Stack

Databases: PostgreSQL, MySQL, SQLite

Frontend & Tools: Next.js, React, Streamlit, Tailwind CSS, Git, VS Code, Jupyter Notebook, Google Colab

CS Foundations: OOP, Data Structures & Algorithms

Soft Skills: Leadership, Communication, Problem-Solving, Presentation
